The **tile steps, patios, and balconies** become **extremely slippery when wet**.

18. Air Conditioning Settings

Air Conditioner Care – Please Read

To keep the air conditioners running smoothly, please **set the thermostat between 72°F and 75°F**. Setting it lower can cause the unit to **freeze up**, especially in our humid island climate.

If the system freezes due to low settings, **no repair services are available on Saturday or Sunday**, so the air will remain off until Monday.

Please also **keep all doors and windows closed** while the air is on. Open doors let in humidity, making the unit work harder and increasing the risk of **freezing up or shut down completely**.

Keeping doors closed also helps **prevent bugs and insects** from getting inside.
